

The bend support is used for supporting and rigidifying pipes to make a smooth 90-degree turn where needed. HydroHeat bend support provides a rigid bend which changes the pipe's direction without causing excessive bending.

CODE	A	B	C
ACC-PB1012	100mm	100mm	10-12mm
ACC-PB1418	114.8mm	114.8mm	14-18mm

Application:

- HydroHeat bend supports allow to securely and safely connect the floor heating pipe between the underfloor heating system and the manifold or between the vertical heating surface (wall heating) and the horizontal heating surface, without the risk of generating excess bending stress on the pipe, which may lead to deforming or breaking the pipe.
- Bend supports are also used for changing the direction of the pipe at 90-degree angle directly at the underfloor
- Heating insulation layer The 10-12 mm mounting clip of the bend support allows for secure and stable mounting of the bend support to the floor, wall or ceiling.

Thanks to the modern material they are made of GF nylon and their reliable and rigid structure, HydroHeat bend supports assure rigidity and sturdiness.
